

1. Reserve Ahead of Time.

2. Prepare Now.

3. Rotate on Your Schedule.

Our itinerary feature lets you simultaneously apply to multiple U.S. clinical experiences. Whether you reserve experiences back-to-back or spread them apart, itinerary helps you prepare for them in one centralized dashboard.

WHAT IS ITINERARY

Itinerary is a feature on the AMO user platform that allows you to group multiple U.S. clinical experiences together. Instead of applying to multiple programs with multiple applications, using the "Add to Itinerary" feature lets you generate a schedule of multiple clinical experiences. Once your itinerary is set, you can apply, pay for, upload documents, and reserve all programs on your itinerary directly from a single dashboard.

BENEFITS OF ITINERARY

From simplifying logistics to loading documents required for each of your rotations, using the itinerary feature has many benefits.

Centralize Your Applications

Because the itinerary feature links your applications together, uploading required documents is easier than ever. Itinerary takes the repetition out of uploading documents required across multiple rotations. Now, when you upload a document to your itinerary, it is uploaded to all your applications. You will also have one centralized list of required documents, so you know exactly what you need to upload and when.

One file. One spot. One upload.

Earn Multiple Letters of Recommendation

Letters of recommendation are an important part of your residency application. With AMO's clinical experiences offering merit-based letters of recommendation, booking multiple rotations is a great way to earn multiple LoRs that works for your schedule.

Stay Organized

There is a lot to keep track of when traveling for your U.S. clinical experience. Beyond flight times and lodging check-in and check-out times, you will also have to keep track of locations, start dates, and reporting times for your clinical experiences.

The itinerary feature organizes your clinical experiences in chronological order. This makes it easier to keep track of where you need to be and when you need to be there. This can help with structuring a plan for getting to and from clinical sites, scheduling housing, and providing you with a detailed plan to share with preceptors should any delays arise.
