

CASE STUDY

Universidad Autónoma de Baja California

UABC is a public medical school in Mexicali, Mexico who worked with AMO to provide students with quality clinical rotations amid the Covid-19 pandemic.

PROBLEM SOLVING A CRISIS

Like many schools during the pandemic, UABC faced a barrier. Overwhelmed by a rapidly growing number of Covid-19 patients, hospitals in both the U.S. and Mexico began closing their clinical training programs. This forced students at medical schools like UABC to pause their progress toward graduation.

Following the launch of AMO's virtual rotations in 2020, AMO and UABC worked together to successfully host the school's first two virtual cohorts in 2021.

4.9/5

Average Review Rating

In 2020, AMO developed virtual rotations—a solution to the bottleneck that the pandemic put on medical education.

In 2021, following the launch of virtual rotations, AMO and UABC worked together and hosted the first two cohorts.

A PARTNERSHIP FOR THE FUTURE

The solutions to away rotations that UABC found with AMO offer longer-term benefits to UABC and its students.

UABC has indicated its intent to grow its programming through AMO, and the school plans to send a third cohort of 25 students in the summer of 2022. Both AMO and UABC expect a fourth cohort of 25 students to rotate in December 2022 with hopes of it being their first in-person cohort.
